ASSIGNMENT 1:

How to compile ?

- There is a makefile present in the src folder of Assignment 1 folder . Running the following command will create the respective object files for daemon and processes
    - make compile

How to Run the program:

- After running the make compile command, we have object files to run the programs.
- Firsty, start the daemon process, to do this the following command will work:
    - ./daemon
- Next, lets start the processes that want to be part of this network. To make this happen run the following command:
    - ./processes
    - An input message will be popped asking to enter the number of processes that you want to create .
    - Sample input : 4
